

Use Case: Add Referee Group to a Game

Main Flow

1. The user selects Add Referees from the main menu.
2. The system shows the information of the latest game that the user has created and does not have referee group (showing **name** of the game, its related **sport** and **number** of expected referees) the list of available referees that are instructed in the sport of such game, indicating their **name, surname, years refereeing** (just values higher than 0) such sport and **rating** (that can take values between 0 and 5) obtained till the moment.
3. The user selects the preferred referees and presses next.
4. The system shows the **name, surname, years refereeing** such sport and **rating** obtained till the moment of the referees chosen to form the group.
5. The system requests the user to introduce the following mandatory information: the **group's name** (must be unique between 3 and 10 characters) and the **role** (between 3 and 20 characters) that each referee will play and a **description** of such role (between 3 and 255 chars). It also requests the following optional data: **description of the referee group and game rules** they should take care of during the game.
6. The user fills in that information and selects the Confirm option.
7. The system displays a confirmation message with a summary of the action including the information of the game (**name, date, place, time** and **sport**), the referee group (**name, description** and **game rules**) and the details of each referee that composes the group (**name, surname, years refereeing, role** and its **description**).

Alternative flow 1 – to step 2

If there are no future games that the user is captain of, the system will show an error message.

Alternative flow 2 – to step 2

If there are not referees available for the sport of the game selected, it will show an error message.

Alternative flow 3 - to step 2

4.1 The system offers the users the alternative to select another sport by selecting a different game that has pending the assignment of a Referee group that the user is responsible for or filter according to the years refereeing (higher or equal).

4.2 The user selects those filters he is interested in.

4.3 The system shows those referees that satisfy only the selected filters.

Alternative flow 4 - to step 7

If the system detects that any mandatory data have not been filled or do not satisfy the conditions, it will show an error message to correct the error.

Alternative flow 5 - to step 7

If the system finds an error while creating the Referee Group because the number of referees invited is too small for the sport of the game, then it will show an error message and will ask the user to return to step 2 to select more referees.

Alternative flow 6 - to step 7

If the system finds an error while creating the Referee Group because the name of the Referee Group already exist, it will show an error message to correct the error.

Pre-condition

The user must be logged in the system to start the use case.

Post-condition

Each referee will be marked as pending of assignment.
